

----- FOR IMMEDIATE RELEASE -----

**CealTec™** Products Inc., is pleased to announce the launch of its CealDoctor line of self-healing engine treatments. By bonding with engine block imperfections, CealDoctor products significantly increase fuel economy and reduce emissions, helping combustion engines operate more efficiently.

These revolutionary products utilize metal nano powder to recover the damaged parts of the engine because the parts of the engine being targeted are metal. Conventional engine treatments are made with MoS<sup>2</sup>, graphite and PTFE—ingredients that easily degrade in high temperature environments, leading to frequent applications. CealDoctor's Cu-Ni (Copper-Nickel) alloy particles bond with blemishes and do not oxidize under the high temperatures. This means that frequent re-application is not necessary.

## ABOUT **CealDoctor™**

---

**CealDoctor™** products are self-healing lubricants designed at the nano-technology level and formulated for most types of fossil fueled engines and mechanical devices that require internal cures for damaged surfaces due to wear or foreign particle damage. Cracks can be healed in many situations to restore original OEM performance.
